Agrément Certificate 24/7224

Product Sheet 1 Issue 1

UNILIN WARM-R EPS INSULATION

HYTHERM SD, HYTHERM HD AND WARM-R PREMIUM SD, WARM-R PREMIUM HD UNDERFLOOR INSULATION

This Agrément Certificate Product Sheet⁽¹⁾ relates to Hytherm SD, Hytherm HD and Warm-R Premium SD, Warm-R Premium HD Underfloor Insulation, a range of rigid expanded polystyrene (EPS) boards, for use as insulation in ground-bearing or suspended concrete ground floors, or between the joists of suspended timber ground-floors, in new and existing domestic buildings.

(1) Hereinafter referred to as 'Certificate'.

The assessment includes

Product factors:

- · compliance with Building Regulations
- compliance with additional regulatory or nonregulatory information where applicable
- · evaluation against technical specifications
- assessment criteria and technical investigations
- · uses and design considerations

Process factors:

- · compliance with Scheme requirements
- · installation, delivery, handling and storage
- production and quality controls
- · maintenance and repair

Ongoing contractual Scheme elements†:

- · regular assessment of production
- · formal 3-yearly review

KEY FACTORS ASSESSED

- Section 1. Mechanical resistance and stability
- Section 2. Safety in case of fire
- Section 3. Hygiene, health and the environment
- Section 4. Safety and accessibility in use
- Section 5. Protection against noise
- Section 6. Energy economy and heat retention
- Section 7. Sustainable use of natural resources
- Section 8. Durability

The BBA has awarded this Certificate to the company named above for the products described herein. These products have been assessed by the BBA as being fit for their intended use provided they are installed, used and maintained as set out in this Certificate.

On behalf of the British Board of Agrément

Date of issue: 21 August 2024

Hardy Giesler

Chief Executive Officer

This BBA Agrément Certificate is issued under the BBA's Inspection Body accreditation to ISO/IEC 17020. Sections marked with † are not issued under accreditation.

The BBA is a UKAS accredited Inspection Body (No. 4345), Certification Body (No. 0113) and Testing Laboratory (No. 0357).

Readers MUST check that this is the latest issue of this Agrément Certificate by either referring to the BBA website or contacting the BBA directly.

The Certificate should be read in full as it may be misleading to read clauses in isolation.

Any photographs are for illustrative purposes only, do not constitute advice and should not be relied upon.

British Board of Agrément 1st Floor, Building 3, Hatters Lane Croxley Park, Watford Herts WD18 8YG

SUMMARY OF ASSESSMENT AND COMPLIANCE

This section provides a summary of the assessment conclusions; readers should refer to the later sections of this Certificate for information about the assessments carried out.

Compliance with Regulations

Having assessed the key factors, the opinion of the BBA is that Hytherm SD, Hytherm HD and Warm-R Premium SD, Warm-R Premium HD Underfloor Insulation, if installed, used and maintained in accordance with this Certificate, can satisfy or contribute to satisfying the relevant requirements of the following Building Regulations:

The Building Regulations 2010 (England and Wales) (as amended)

Requirement: A1 Loading

Comment: The products can contribute to satisfying this Requirement. See section 1 of this

Certificate.

Requirement: C2(c) Resistance to moisture

Comment: The products can contribute to satisfying this Requirement. See section 3 of this

Certificate.

Requirement: L1(a)(i) Conservation of fuel and power

Comment: The products can contribute to satisfying this Requirement; however, compensating

fabric measures may be required. See section 6 of this Certificate.

Regulation: 7(1) Materials and workmanship

Comment: The products are acceptable. See section 9 of this Certificate.

Regulation 25B Nearly zero-energy requirements for new buildings
Regulation 26 CO2 emission rates for new buildings

Regulation 26A Fabric energy efficiency rates for new dwellings (applicable to England only)

Regulation 26A Primary energy rates for new buildings (applicable to Wales only)
Regulation 26B Fabric performance values for new dwellings (applicable to Wales only)
Regulation 26C Target primary energy rates for new buildings (applicable to England only)

Regulation 26C Energy efficiency rating (applicable to Wales only)

Comment: The products can contribute to satisfying these Regulations; however, compensating

fabric/service measures may be required. See section 6 of this Certificate.

The Building (Scotland) Regulations 2004 (as amended)

Regulation: 8(1) Fitness and durability of materials and workmanship

Comment: The products are acceptable. See sections 8 and 9 of this Certificate.

Regulation: 9 Building standards - construction

Standard: 1.1(b) Structure

Comment: The products can contribute to satisfying this Standard, with reference to clause

1.1.2⁽¹⁾. See section 1 of this Certificate.

Standard: 3.15 Condensation

Comment: The products can contribute to satisfying this Standard, with reference to clauses

 $3.15.1^{(1)}$, $3.15.4^{(1)}$ and $3.15.5^{(1)}$. See section 3 of this Certificate.

Standard: 6.1(b)(c) Energy demand

Comment: The products can contribute to satisfying this Standard, with reference to clause

6.1.1⁽¹⁾; however, compensating fabric/service measures may be required. See section

6 of this Certificate.

BBA 24/7224 PS1 Issue 1 Page 2 of 17

Standard: 6.2 Building insulation envelope

The products can contribute to satisfying this Standard, with reference to clauses, or Comment: parts of clauses, $6.2.1^{(1)}$, $6.2.3^{(1)}$, $6.2.6^{(1)}$, $6.2.7^{(1)}$, $6.2.8^{(1)}$, $6.2.9^{(1)}$, $6.2.10^{(1)}$, $6.2.11^{(1)}$ and

6.2.12⁽¹⁾; however, compensating fabric measures will be required. See section 6 of this

Certificate.

Standard: 7.1(a)(b) Statement of sustainability

Comment: The products can contribute to satisfying the relevant requirements of Regulation 9,

Standards 1 to 6, and therefore will contribute to a construction meeting a bronze level of sustainability as defined in this Standard. In addition, the products can contribute to a construction meeting a higher level of sustainability as defined in this Standard, with

reference to clauses $7.1.4^{(1)}$, $7.1.6^{(1)}$ and $7.1.7^{(1)}$. See section 6 of this Certificate.

Regulation: 12 **Building standards - conversion**

Comment: All comments made in relation to the products under Regulation 9, Standards 1 to 6,

also apply to this Regulation, with reference to clause $0.12.1^{(1)}$ and Schedule $6^{(1)}$.

(1) Technical Handbook (Domestic).

The Building Regulations (Northern Ireland) 2012 (as amended)

Fitness of materials and workmanship Regulation: 23(1)(a)(i)

Comment: (iii)(b)(i)(ii) The products are acceptable. See sections 8 and 9 of this Certificate.

Regulation: 29 Condensation

Comment: The products can contribute to satisfying this Regulation. See section 3 of this

Certificate.

Regulation: 30 Stability

Comment: The products can contribute to satisfying this Regulation. See section 1 of this

Certificate.

Regulation: 39(a)(i) **Conservation measures**

Regulation: 40(2) Target carbon dioxide emission rate Regulation: 43(1)(2) **Renovation of thermal elements**

Regulation: 43B Nearly zero-energy requirements for new buildings

Comment: The products can contribute to satisfying these Regulations; however, compensating

fabric/service measures may be required. See section 6 of this Certificate.

Additional Information

NHBC Standards 2024

In the opinion of the BBA, Hytherm SD, Hytherm HD and Warm-R Premium SD, Warm-R Premium HD Underfloor Insulation, if installed, used and maintained in accordance with this Certificate, can satisfy or contribute to satisfying the relevant requirements in relation to NHBC Standards, Chapters 5.1 Substructure and ground bearing floors and 5.2 Suspended ground floors.

Fulfilment of Requirements

The BBA has judged Hytherm SD, Hytherm HD and Warm-R Premium SD, Warm-R Premium HD Underfloor Insulation to be satisfactory for use as described in this Certificate. The products have been assessed for use as installation in ground-bearing or suspended concrete ground floors or between the joists of suspended timber ground floors, in new and existing domestic buildings.

BBA 24/7224 PS1 Issue 1 Page 3 of 17

ASSESSMENT

Product description and intended use

The Certificate holder provided the following description for the products under assessment. Hytherm SD, Hytherm HD and Warm-R Premium SD, Warm-R Premium HD Underfloor Insulation comprise ridged EPS boards, available in four grades. Warm-R is manufactured from white EPS bead; Warm-R Premium is made from graphite/carbon enhanced EPS bead.

The products have the nominal characteristics given in Table 1.

Table 1 Nominal characteristics of Warm-R and Warm-R Premium Underfloor Insulation

	Product					
Characteristic (unit)	Hytherm SD (white)	Hytherm HD (white)	Warm-R Premium SD grey),			
			Warm-R Premium HD (grey)			
Length (mm)	1200, 1800, 2400	1200, 1800, 2400	1200, 1800, 2400			
Width (mm)	600, 1200	600, 1200	600, 1200			
Thickness (mm)	25 to 150	25 to 150	25 to 150			
	(in 5 mm increments)	(in 5 mm increments)	(in 5 mm increments)			
Edge profile	Square, tongue-and-groove,	Square, tongue-and-groove,	Square, tongue-and-groove,			
	rebated	rebated	rebated			

The products are intended for use as underfloor insulation in new and existing domestic buildings in:

- ground-supported concrete floors
- suspended concrete ground floors
- between the joists of suspended timber ground floors.

Ancillary items

The Certificate holder recommends the following ancillary items for use with the products, but these materials have not been assessed by the BBA and are outside the scope of this Certificate:

The overlay to the products should be:

- an air and vapour control layer (AVCL) where necessary (see section 3) and:
- a cement-based floor screed of minimum 65 mm⁽¹⁾ thickness, laid in accordance with the relevant clauses of BS 8204-1: 2003 and/or BS 8204-2: 2003, and BS 8000-9: 2003 or
- wood-based floor (eg tongue-and-groove plywood to BS EN 636: 2012, flooring grade particle board [Type P4 or P7] to BS EN 312: 2010 or oriented strand board [type OSB/3 to OSB/4] to BS EN 300: 2006), of a thickness to be determined by a suitably experienced and competent individual, and installed in accordance with PD CEN/TR 12872: 2014 and BS EN 12871: 2013 or
- a concrete slab to BS EN 1992-1-1: 2004.
- (1) The NHBC only accept ground-supported floor slabs with at least 100 mm thick concrete including a monolithic screed.

Product assessment – key factors

The products were assessed for the following key factors, and the outcome of the assessment is shown below. Conclusions relating to the Building Regulations apply to the whole of the UK unless otherwise stated.

1 Mechanical resistance and stability

Data were assessed for the following characteristics.

1.1 Floor loading

1.1.1 The products were tested for compressive strength and the results are given in Table 2.

BBA 24/7224 PS1 Issue 1 Page 4 of 17

Table 2 Compressive streng	gth				
Product assessed	Assessment method	Requirement	Result		
Hytherm SD and	BS EN 826 : 2013	Declared minimum compressive	70 kPa		
Warm-R Premium SD	strength of the product				
		at 10% deformation			
Hytherm HD and	BS EN 826 : 2013	Declared minimum compressive	100 kPa		
Warm-R Premium HD		strength of the product			
		at 10% deformation			

- 1.1.2 On the basis of data assessed, the products are suitable for the occupancies defined in this Certificate when covered with a suitable floor overlay, and are capable of resisting a uniformly distributed load of 1.5 kN·m⁻² or a concentrated load of 2 kN for category A1 and A2 (domestic) situations as defined in the UK National Annex to BS EN 1991-1-1: 2002, Table NA2. Further assessment by a suitably experienced and competent individual is necessary in the case of duty walkways and floors subject to physical activities.
- 1.1.3 The performance of a specific floor construction will depend on the insulation properties and type of floor overlay used (including thickness and strength). When the products are used under a concrete slab, resistance to concentrated and distributed loads is a function of the slab specification. Further guidance on the suitability of floor coverings can be found in BS EN 13810-1: 2002, DD CEN/TS 13810-2: 2003, BS 8204-1: 2003 and BS EN 312: 2010, and from the flooring manufacturer, although the latter is outside the scope of this Certificate.

2 Safety in case of fire

Data were assessed for the following characteristics.

2.1 Reaction to fire

2.1.1 The products were tested for reaction to fire and the classification is given in Table 3.

Table 3 Reaction to fire classification					
Product assessed	Assessment method	Requirement	Result		
Hytherm SD and	NE FN 13501-1 : 2018	Reaction to fire	F		
Hytherm HD	NI EN 15501-1 : 2016	classification	I		
Warm-R Premium SD and	NF FN 13501-1 : 2018	Reaction to fire	Е		
Warm-R Premium HD	NF EN 13501-1 : 2018	classification	Ē		

- 2.1.2 Details of the classification can be found in test report DO-23-4670\A-R1 (Issue no 1, 17/03/2023), issued by CREPIM, available from the Certificate holder. This classification is valid for thicknesses of 25 to 200 mm.
- 2.1.3 The designation, classification and/or permissible areas of use of other specifications should be confirmed by reference to the requirements of the documents supporting the national Building Regulations.

3 Hygiene, health and the environment

Data were assessed for the following characteristics.

3.1 Water vapour permeability

3.1.1 For the purposes of assessing the risk of interstitial condensation, the water vapour resistivity may be taken as stated in Table 4.

Table 4 Water vapour resistivity					
Product assessed	Assessment method	Requirement	Result		
Hytherm SD and	BS EN 12086: 2013	Declared value	262.23 MNs·g ⁻¹ ·m ⁻¹		
Warm-R Premium SD (1)	(3)				
Hytherm HD and	BS EN 12086: 2013	Declared value	226.34 MNs·g ⁻¹ ·m ⁻¹		
Warm-R Premium HD (2)(3)				

- (1) EPS insulation 1200 x 590 x 50 mm (W-98.6, A38, Grey).
- (2) EPS insulation 1200 x 590 x 50 mm (W-117.9, HD. White).
- (3) Test conditions: cup 0% rh, cabinet 84% rh at 23.4°C, mean exposed surface area was 217 cm².

BBA 24/7224 PS1 Issue 1 Page 5 of 17

3.2 Condensation

- 3.2.1 The BBA has assessed the products for the risk of condensation, and the following factors must be implemented.
- 3.2.1.1 When the products are used on a ground-bearing floor or a suspended concrete floor, an AVCL is installed on the warm side of the insulation to inhibit the risk of interstitial condensation, unless a risk assessment shows this is not necessary.
- 3.2.1.2 Voids below suspended timber ground floors must be ventilated. Ventilation may be achieved by installing vents not less than 1500 mm²·m⁻¹ run of external wall or 500 mm²·m⁻² of floor area, whichever is the greater. Ventilation openings should be arranged to prevent the ingress of rain, snow, birds and small mammals and the risk of subsequent blockage by other building operations.

4 Safety and accessibility in use

Not applicable.

5 Protection against noise

Not applicable.

6 Energy economy and heat retention

Data were assessed for the following characteristics.

6.1 Thermal conductivity

6.1.1 The products were tested for thermal conductivity and the results are given in Table 5.

Table 5 Thermal conductive	ity		
Product assessed	Assessment method	Requirement	Result
Hytherm SD (White)	BS EN 13163 : 2012	Declared value (λ_D)	0.038 W·m ⁻¹ ·K ⁻¹
Hytherm HD (White)	_		0.035 W·m ⁻¹ ·K ⁻¹
Warm-R Premium SD	_		0.031 W·m ⁻¹ ·K ⁻¹
(Grey) and Warm-R			
Premium HD (Grey)			

6.2 Thermal Performance

6.2.1 The U value of a ground floor will depend on the insulation type and thickness, the perimeter/area ratio, the ground conductivity and, additionally for suspended ground floors, the amount of underfloor ventilation and the floor void wall U value. Example U-values are given in Table 6.

BBA 24/7224 PS1 Issue 1 Page 6 of 17

- (1) Ground-bearing concrete floor construction (Unilin Hytherm HD, Hytherm SD and Warm-R Premium SD, Warm-R Premium SD Underfloor Insulation on top of slab, under screed finish) 65 mm concrete screed (λ = 1.15 W·m⁻¹·K⁻¹), polyethylene separating layer, Unilin Hytherm HD, Hytherm SD and Warm-R Premium SD, Warm-R Premium SD, damp-proof membrane (DPM), 100 mm concrete oversite, 150 mm sand-blinded hardcore, ground (λ = 1.5 W·m⁻¹·K⁻¹).
- (2) Suspended concrete ground-floor construction (Unilin Hytherm HD, Hytherm SD and Warm-R Premium SD, Warm-R Premium SD on top of beam and block, below screed finish) 65 mm concrete screed λ = 1.15 W·m⁻¹·K⁻¹, polyethylene separating layer, Unilin Hytherm HD, Hytherm SD and Warm-R Premium SD, Warm-R Premium SD, beam and block floor (12%) Beam (λ = 2.00 W·m⁻¹·K⁻¹), dense block infill (λ = 1.13 W·m⁻¹·K⁻¹), ventilation area (ε) to floor void 0.0015 m²·m⁻¹.
- (3) Suspended timber ground-floor construction (Unilin Hytherm HD, Hytherm SD and Warm-R Premium SD, Warm-R Premium SD between floor joists) floor deck based on 22 mm chipboard (λ = 0.13 W·m⁻¹·K⁻¹), Unilin Hytherm HD, Hytherm SD and Warm-R Premium SD, Warm-R Premium SD (89%) between 47 mm wide joists at 400 mm centres. The depth of the joists = 100 to 150 mm depending on the depth of insulation between timber (λ = 0.13 W·m⁻¹·K⁻¹) floor joists (11%) based on BRE Report BR 443 : 2019 (38 mm wide nogging every 3 metres). Edge insulation not included. Ventilation area (ϵ) to floor void 0.0015 m²·m⁻¹.
- (4) 25 mm edge insulation, $\lambda_D = 0.038 \text{ W} \cdot \text{m}^{-1} \cdot \text{K}^{-1}$, 65 mm deep.
- (5) 25 mm edge insulation, λ_D = 0.035 W·m⁻¹·K⁻¹, 65 mm deep.
- (6) 25 mm edge insulation, $\lambda_D = 0.031 \text{ W} \cdot \text{m}^{-1} \cdot \text{K}^{-1}$, 65 mm deep.
- (7) Supporting wall (U_w) 1.7 W·m⁻²·K⁻¹, wall thickness at the floor perimeter (w) 0.3 m.
- (8) See section 6.2.3.
- 6.2.2 The products can contribute towards a construction satisfying the national Building Regulations in respect of energy economy and heat retention.
- 6.2.3 For improved energy or carbon savings, designers must consider appropriate fabric and/or services measures.

7 Sustainable use of natural resources

Not applicable.

8 Durability

- 8.1 The potential mechanisms for degradation and the known performance characteristics of the materials in the products were assessed.
- 8.2 Specific test data were assessed as given in Table 7.

BBA 24/7224 PS1 Issue 1 Page 8 of 17

Table 7 Dimensional stability						
Product assessed	Assessment method	Requirement	Result			
Hytherm SD	BS EN 1604 : 2013	Declared value	Length, width and			
	(70°C and 90-100% RH for 48 hours)		thickness ≤ 1% change

Warm-R Premium HD	(70°C and 90-100% RH for 48 hours)		thickness ≤ 1% change			

8.3 Service life

Under normal service conditions, the products will have a life equivalent to that of the building in which they are incorporated, provided they are designed, installed and maintained in accordance with this Certificate and the Certificate holder's instructions.

PROCESS ASSESSMENT

Information provided by the Certificate holder was assessed for the following factors:

9 Design, installation, workmanship and maintenance

9.1 Design

- 9.1.1 The design process was assessed by the BBA and the following requirements apply in order to satisfy the performance specified in this Certificate.
- 9.1.2 The products can be used on suitably designed beam-and-block floors incorporating Type R2 semi-resisting or resisting blocks to BS EN 15037-2 : 2009 and self-bearing beams to BS EN 15037-1 : 2008.
- 9.1.3 Ground-bearing floors must only be used where the depth of compacted fill is less than 600 mm and defined as non-shrinkable. Shrinkable fills are defined as material containing more than 35% fine particles (silt and clay) with a plasticity index of 10% or greater (shrinkable fills are susceptible to clay heave).
- 9.1.4 Ground-bearing concrete and suspended concrete ground-floors incorporating the products must include a suitable damp-proof membrane (DPM), laid beneath the insulation, in accordance with the relevant clauses of CP 102: 1973, BS 8102: 2022 and BS 8215: 1991 (see section A.5 of this Certificate).
- 9.1.5 Suspended concrete or timber ground-floors incorporating the insulation boards must include suitable ventilation of the sub-floor void (minimum 150 mm void between the underside of the floor and the ground surface) or a DPM. For suspended floors in locations where clay heave is anticipated, an additional void of up to 150 mm may be required to accommodate the possible expansion of the ground below the floor. In such cases where the risk of clay heave has been confirmed by geotechnical investigations by a competent individual, a total void of up to 300 mm may be required.
- 9.1.6 Where a concrete screed or slab finish is laid directly over the products, a polyethylene separating layer/AVCL must be installed between the insulation and the concrete to prevent chemical attack and seepage between the boards (see section A.7). Any gaps between insulation boards or around service openings visible prior to installing the concrete, must be filled with expanding foam or strips of insulation.
- 9.1.7 Internal walls must not be built on the insulation.
- 9.1.8 Calculations of thermal transmittance (U value) should be carried out in accordance with BS EN ISO 13370 : 2017 and BRE Report BR 443 : 2019.
- 9.1.9 Care must be taken in the overall design and construction of junctions with other elements and openings to minimise thermal bridges and air infiltration and the detailed guidance that can be found in the documents supporting the national Building Regulations must be followed.

BBA 24/7224 PS1 Issue 1 Page 9 of 17

Interstitial condensation

- 9.1.10 Floors will adequately limit the risk of interstitial condensation when they are designed and constructed in accordance with BS 5250: 2021.
- 9.1.11 When the products are used above the DPM on a ground-bearing or suspended concrete floor, an AVCL is installed on the warm side of the insulation to limit the risk of interstitial condensation, unless a risk assessment shows this is not necessary.
- 9.1.12 For suspended timber ground floors, it is not necessary to introduce a VCL as long as adequate sub-floor cross ventilation is provided.

Surface condensation

- 9.1.13 In England and Wales, floors will adequately limit the risk of surface condensation when the thermal transmittance (U value) does not exceed 0.7 $W \cdot m^{-2} \cdot K^{-1}$ at any point, and the junctions with walls are designed in accordance with section 9.1.9 of this Certificate.
- 9.1.14 For buildings in Scotland, constructions will be acceptable where the thermal transmittance (U value) of the floor does not exceed 1.2 $W \cdot m^{-2} \cdot K^{-1}$ at any point, and the floor is designed and constructed in accordance with the relevant parts of BS 5250 : 2021.
- 9.1.15 Further guidance may be obtained from BRE Report BR 262: 2002 and section 6 of this Certificate.
- 9.2 Installation
- 9.2.1 Installation instructions provided by the Certificate holder were assessed and judged to be appropriate and adequate.
- 9.2.2 Installation must be carried out in accordance with this Certificate and the Certificate holder's instructions. A summary of instructions and guidance is provided in Annex A of this Certificate.

Incorporation of services

- 9.2.3 De-rating of electrical cables must be considered where the insulation restricts air cooling of cables; the products must not be used in direct contact with electrical heating cables or hot water pipes. Where underfloor heating systems are to be used, the advice of the Certificate holder must be sought, but such advice is outside the scope of this
- 9.2.4 Where possible, electrical conduits, gas and water pipes or other services must be contained within ducts or channels within the concrete slab of ground bearing floors. Where this is not possible, the services may be accommodated within the insulation, provided they are securely fixed to the concrete slab. Electrical cables that are likely to come into contact with the insulation must be protected by a suitable conduit or PVC-U trunking. With hot pipes, the insulation must be cut back to maintain an air space.
- 9.2.5 Where water pipes are installed below the insulation, they must be pre-lagged with close-fitting pipe insulation.
- 9.2.6 Where the products are installed on a floor of a suspended beam-and-block design, all services must be installed in accordance with a BBA Certificate for that floor and/or with the relevant codes of practice.
- 9.2.7 To provide support for a particle board cover on overlay board floors where access to the services is desirable, a duct may be formed by mechanically fixing to the floor, timber bearers of the same thickness as the insulation. The duct must be as narrow as possible and not exceed 400 mm in width or the maximum particle board spans given in PD CEN/TR 12872: 2014 without intermediate support. Services must be suitably fixed to the floor base and not to the insulation boards (see section 9.1.9 of this Certificate regarding limiting heat loss).
- 9.2.8 On suspended timber ground floors, all the services must be incorporated beneath the existing floor, if possible.

BBA 24/7224 PS1 Issue 1 Page 10 of 17

9.3 Workmanship

Practicability of installation was assessed by the BBA on the basis of the Certificate holder's information. To achieve the performance described in this Certificate, installation of the products must be carried out by a competent general builder, or a contractor experienced with these types of products.

9.4 Maintenance and repair

As the products are confined within the floor by the overlay and have suitable durability, maintenance is not required.

10 Manufacture

- 10.1 The production processes for the products have been assessed, and provide assurance that the quality controls are satisfactory according to the following factors:
- 10.1.1 The manufacturer has provided documented information on the materials, processes, testing and control factors.
- 10.1.2 The quality control operated over batches of incoming materials has been assessed and deemed appropriate and adequate.
- 10.1.3 The quality control procedures and product testing to be undertaken have been assessed and deemed appropriate and adequate.
- 10.1.4 The process for management of non-conformities has been assessed and deemed appropriate and adequate.
- 10.1.5 An audit of each production location was undertaken, and it was confirmed that the production process was in accordance with the documented process, and that equipment has been properly tested and calibrated.
- † 10.2 The BBA has undertaken to review the above measures on a regular basis through a surveillance process, to verify that the specifications and quality control operated by the manufacturer are being maintained.

11 Delivery and site handling

- 11.1 The Certificate holder stated that the products are delivered to site in polythene shrink-wrapped packs bearing the manufacturer's trade name, product description, and the BBA logo incorporating the number of this Certificate.
- 11.2 Delivery and site handing must be performed in accordance with the Certificate holder's instructions and this Certificate, including:
- 11.2.1 The products must be protected from prolonged exposure to sunlight either under cover or protected with opaque polythene; where possible, packs must be stored inside. If outside, the boards must be stacked flat, raised above ground level and not in contact with ground moisture.
- 11.2.2 Care must be exercised to avoid crushing the edges or corners. If damaged, the products must be discarded.
- 11.2.3 The products must not be exposed to open flame or other ignition sources, or to solvents or other chemicals.

BBA 24/7224 PS1 Issue 1 Page 11 of 17

ANNEX A – SUPPLEMENTARY INFORMATION †

Supporting information in this Annex is relevant to the products but has not formed part of the material assessed for the Certificate.

<u>Construction (Design and Management) Regulations 2015</u> Construction (Design and Management) Regulations (Northern Ireland) 2016

Information in this Certificate may assist the client, designer (including Principal Designer) and contractor (including Principal Contractor) to address their obligations under these Regulations.

CE marking

The Certificate holder has taken the responsibility of CE marking the products in accordance with harmonised European Standard EN 13163: 2012.

Management Systems Certification for production

The management system of the manufacturer has been assessed and registered as meeting the requirements of BS EN ISO 9001: 2015 and BS EN ISO 14001: 2015 by Loss Prevention Certification Board (Certificates 851 and EMS 851) respectively.

Additional information on installation

A.1 Typical methods of installation are shown in Figures 1 to 6. Reference should also be made to BRE Report BR 262 : 2002.

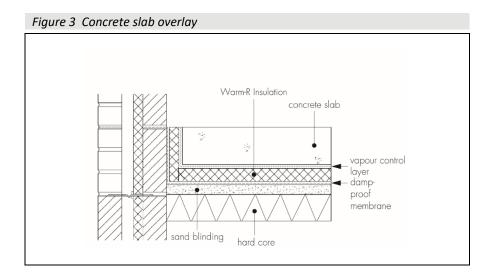

Figure 4 Ground-bearing concrete floor — board overlay

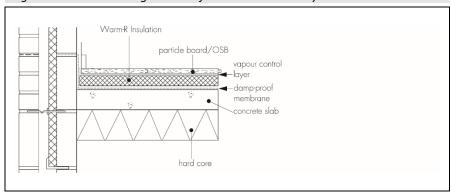

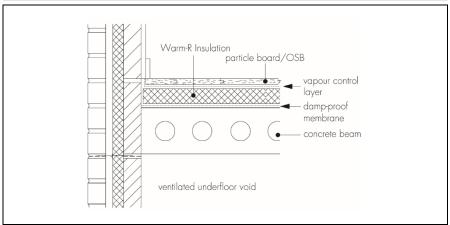

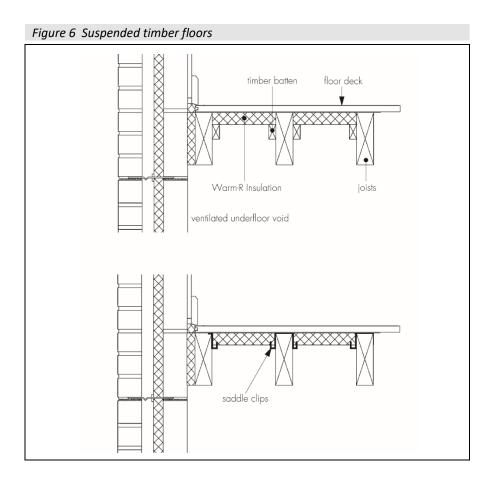

Figure 5 Suspended concrete floor — board overlay

BBA 24/7224 PS1 Issue 1 Page 13 of 17

A.2 In ground-bearing concrete floors, the concrete floor slab over which the products are laid should be left for as long as possible to maximise drying out and the dissipation of construction moisture, in accordance with BS 8203: 2017, Section 3.1.2.

A.3 The concrete floor surfaces should be smooth, level and flat to within 5 mm when measured with a two metre straight-edge. Irregularities greater than this must be removed. Minor irregularities (up to 10 mm deep) may be levelled with mortar or thin screed.

A.4 Where the insulation is used over ground-bearing concrete floor slabs, a suitable DPM should be laid in accordance with BS 8215: 1991, to resist moisture from the ground. If a liquid-type DPM is applied to the slabs, it should be of a type compatible with the insulation product and must be allowed to dry out fully before laying the insulation.

A.5 Where the insulation is used on hardcore bases beneath ground-bearing concrete slabs, the hardcore must be compacted and blinded with a thin layer of sand, before application of the DPM followed by the insulation boards.

A.6 An AVCL is installed on the warm side of the insulation to inhibit the risk of interstitial condensation if necessary (see section 3). Where a concrete screed or slab finish is to be laid over the products, a polyethylene separating layer/AVCL must be installed between the insulation and the concrete to prevent chemical attack and seepage between the boards.

A.7 Where a screed or concrete slab is laid over the insulation, vertical upstands of insulation should be provided and be of sufficient depth to fully separate the screed or slab from the wall. If used, a suitable cavity wall insulation material should be extended below the DPC level to provide edge insulation to the floor.

A.8 To limit the risk of condensation and other sources of dampness, the products and overlays should only be laid after the construction is made substantially weathertight (eg after glazing). During construction, the products and overlays must also be protected from damage by traffic and moisture sources such as water spillage and plaster droppings.

Procedure

A.9 The boards are cut to size (using a sharp knife or fine-toothed saw), as necessary, and laid with closely butted, staggered cross-joints, ensuring that all spaces are completely filled.

BBA 24/7224 PS1 Issue 1 Page 14 of 17

A.10 The laying pattern should ensure that all cut edges are at the perimeter of the floor or some other feature, eg mat wells, thresholds or access ducts. Spreader boards should be used to protect the insulation.

Timber-based board overlay

- A.11 Before laying the plywood, particle board or OSB overlay, preservative-treated timber battens, in accordance with BS 8417 : 2011, are positioned at doorways and access panels. Adequate time should be allowed for preservatives to be fixed and the solvents from solvent-based preservatives to evaporate.
- A.12 When the insulation is laid above a DPM, a polyethylene AVCL of at least 0.125 mm (500 gauge) thickness is laid between the insulation and the timber board overlay. The AVCL must have 150 mm overlaps, taped at the joints and turned up 100 mm at the walls.
- A.13 Timber-based overlay boards as specified in section 9 are laid with staggered cross-joints in accordance with PD CEN/TR 12872 : 2014 and BS EN 12871 : 2013.
- A.14 An expansion gap between the overlay board and the perimeter walls should be provided at the rate of 2 mm per metre run or a minimum of 10 mm, whichever is the greater.
- A.15 Where there are long, uninterrupted lengths of floor (eg corridors), proprietary expansion joints should be installed at intervals, on the basis of a 2 mm gap per metre run of overlay board.
- A.16 Before the overlay boards are interlocked, a water-resistant PVA adhesive is applied to the joints.
- A.17 Once the overlay board is laid, temporary wedges are inserted between the walls and the floor to maintain tight joints until the adhesive has set.
- A.18 When the wedges are removed and before the skirting boards are fixed, a suitable compressible filler, eg foamed polyethylene, should be fitted around the perimeter of the floor between the overlay board and the walls.
- A.19 Where there is a likelihood of regular water spillage (eg in kitchens, bathrooms, shower and utility rooms), additional overlay board protection should be considered, eg by a continuous flexible vinyl sheet flooring, with welded joints, turned up at abutments and cove skirting.

Cement-based screed overlay

A.20 Perimeter edge pieces are cut and placed around the edges and taped at joints. A polythene AVCL, at least 0.125 mm thick (500 gauge), is laid over the insulation. The AVCL should have 150 mm overlaps, taped at the joints and turned up 100 mm at the walls. A properly compacted screed of a minimum 65 mm thickness is then laid over. The relevant clauses of BS 8204-1: 2003 should be followed.

Concrete slab overlay (ground-bearing only)

A.21 Perimeter edge pieces are cut and placed around the edges and taped at joints. A polythene AVCL, at least 0.125 mm thick (500 gauge), is laid over the insulation. The AVCL should have 150 mm overlaps, taped at the joints and turned up 100 mm at the walls. The concrete slab is laid to the required thickness in accordance with BS 8000-9: 2003 and BS 8204-1: 2003.

Suspended timber floor

- A.22 Insulation boards can be supported between timber joists using saddle clips or timber beads. Where timber beads are used, a void may be incorporated above the insulation to accommodate services, if required.
- A.23 Saddle clips are placed at intervals not exceeding one metre along the timber floor joists. The products are to be installed only on one side of a joist; twin clips can be cut into single clips and nailed into place with galvanized nails.
- A.24 If saddle clips are not used, the products may be retained using preservative-treated timber battens. Battens should be wide enough to retain the products in place and secured with corrosion-protected nails at a depth that will accommodate the thickness of the products.
- A.25 The products should be cut to fit tightly between joists and pushed down onto the spikes of the saddle clips, or onto the beads. Small gaps should be insulated with cut strips of the products.

Conditions of Certificate

Conditions

- 1 This Certificate:
- relates only to the product that is named and described on the front page
- is issued only to the company, firm, organisation or person named on the front page no other company, firm, organisation or person may hold or claim that this Certificate has been issued to them
- is valid only within the UK
- has to be read, considered and used as a whole document it may be misleading and will be incomplete to be selective
- is copyright of the BBA
- is subject to English Law.
- 2 Publications, documents, specifications, legislation, regulations, standards and the like referenced in this Certificate are those that were current and/or deemed relevant by the BBA at the date of issue or reissue of this Certificate.
- 3 This Certificate will be displayed on the BBA website, and the Certificate Holder is entitled to use the Certificate and Certificate logo, provided that the product and its manufacture and/or fabrication, including all related and relevant parts and processes thereof:
- are maintained at or above the levels which have been assessed and found to be satisfactory by the BBA
- continue to be checked as and when deemed appropriate by the BBA under arrangements that it will determine
- are reviewed by the BBA as and when it considers appropriate.
- 4 The BBA has used due skill, care and diligence in preparing this Certificate, but no warranty is provided.
- 5 In issuing this Certificate the BBA is not responsible and is excluded from any liability to any company, firm, organisation or person, for any matters arising directly or indirectly from:
- the presence or absence of any patent, intellectual property or similar rights subsisting in the product or any other product
- the right of the Certificate holder to manufacture, supply, install, maintain or market the product
- actual installations of the product, including their nature, design, methods, performance, workmanship and maintenance
- any works and constructions in which the product is installed, including their nature, design, methods, performance, workmanship and maintenance
- any loss or damage, including personal injury, howsoever caused by the product, including its manufacture, supply, installation, use, maintenance and removal
- any claims by the manufacturer relating to UKCA marking and CE marking.

6 Any information relating to the manufacture, supply, installation, use, maintenance and removal of this product which is contained or referred to in this Certificate is the minimum required to be met when the product is manufactured, supplied, installed, used, maintained and removed. It does not purport in any way to restate the requirements of the Health and Safety at Work etc. Act 1974, or of any other statutory, common law or other duty which may exist at the date of issue or reissue of this Certificate; nor is conformity with such information to be taken as satisfying the requirements of the 1974 Act or of any statutory, common law or other duty of care.
